

Warehouse & Distribution

Medi-Inn Warehouse and Distribution

Distribution of our products is carried out from our central UK warehouse facility. Our warehouse is accredited by UKWA and is TAPA-A certified. Quality control is paramount across operations, with a sophisticated Warehouse Management System in place.

The WMS ensures all products are fully traceable, with inventory reporting of stock in and out and batch numbering. Our warehouse team delivers high levels of customer service throughout our operations.

For distribution of our products, we use a secure fleet to deliver pallets and parcels

to our customers throughout the UK. The distribution operates from a central UK hub, located in the Midlands. Such a location benefits from access to all the major road networks within mainland UK. Our deliveries are optimised using a Transport Management System, providing fleet monitoring and ETAs. The fleet uses security measures such as CCTV to ensure goods are kept secure and is affiliated with the FTA. We also provide same day services from order to dispatch for all urgent deliveries using our same day courier services.
